1. Non-elected claims 14-20 should be cancelled to expedite prosecution.

2. Claims 1, 3-13 and 21-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The independent claims call for the production of a personalized, optically variable element having polarizing properties and that the orientation layer itself is personalized. However, the LCP layer is applied as a solid—ie, film body layer—and it is not clear that the article claimed can be made until the liquid crystal is liquefied, oriented and then solidified to lock in the orientation. Hence, the independent claims are submitted to be indefinite as they are incomplete as to the processing required to make the instant article. It is submitted that the steps necessary to orient the liquid crystal need to be added into the independent claims to remove the indefiniteness and complete the instant method.

3. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Applicant's arguments concerning the coating of the LCP are persuasive and the art rejection has been dropped. However, it is not clear that the instant process can actually be performed without the inclusion of the steps of liquefying the liquid crystal layer, orienting it and then solidifying the layer to form the instant personalized optically variable element. An obviation of the 112 issues would place the application in condition for allowance.
